

Lorex LIVE View Video Baby Monitor

Posted by [BabyRecs Staff](#) on May 9, 2012 [2 Comments](#)

I recently received the newly released [Lorex LIVE View Video Baby Monitor](#) and I love it! I set it up in my sons' room so I can keep an eye on them after they are put to bed.

The Lorex LIVE View is a sleek and stylish video monitor that runs on a “plug-and-play wireless system.” It is the perfect monitor for parents due to the advanced but easy to use features:

- 2.4" LCD screen
- Secure digital wireless signal – do not worry that the signal of your baby will get intercepted due to FHSS (Frequency Hopping Spread Spectrum) technology
- Wireless range is 150 ft indoor
- Color day vision and automatic black and white night vision
- Two way talk intercom
- 4 hours battery life with up to 7 hours on power save mode
- Camera – can mount on wall, ceiling or rest on table/counter
- Parent monitor – stand doubles as a belt clip
- Sleep Mode – monitor display turns off to save power but audio monitoring remains on – the screen will light up when audio is detected
- AC adapter included – plug in monitor for overnight use
- Audio/visual alerts – green LED light when no audio is detected and turns to red as volume increases
- Add up to 3 additional cameras as needed

The Lorex LIVE View is easy to set up and easy to use. The parent unit is really lightweight and compact. It is slim enough to almost rival the size of a cell phone (camera is the same size). The buttons on the monitor are feather-touch which makes it easy to navigate and use but then there is also a lock mode so you don't accidentally press buttons when just carrying the monitor. The set-up on the parent monitor is simple and straightforward. I really love the clarity of the screen –

it was amazing how well I could see my boys in day mode and night mode was actually really clear too. The two-way talk is so useful but it can use improvement. When my boys spoke, it was not as clear coming through and they were not able to understand me very well either. The other negative is the wireless signal. It did occasionally go out when I was walking around the house or even when I had the monitor in one place (I was definitely in the 150 ft indoor range) and then it would take a few seconds to find the signal of the camera again. The monitor would beep to alert me that it lost signal so that is how I recognized that it did do it a few times in one evening.

The Lorex LIVE View Video Baby Monitor is a decent video monitor for the price of \$169.99. You are never going to find a perfect video camera with perfect video clarity and perfect sound so with that in mind you are getting a good deal with the Lorex Live View Video Baby Monitor.

BabyRecs.com – Monish Bhatia requested a review unit of the Lorex LIVE View to include in an upcoming Mother’s Day gift guide. She assigned Neha Dedhia Shah to write the review, which ran on Wednesday, May 9th: <http://babyrecs.com/2012/05/09/lorex-live-view-video-baby-monitor/>.
