**BASIC SETUP**

**Connecting Cameras**

Connect BNC cameras to the BNC ports (VIDEO INPUT) on the rear panel.

**Connecting the Ethernet Cable**

Connect see and view the Ethernet cable to an available LAN port of your router (not included) and the other end to the DVR’s Network Port (LAN).

**Connecting the ‘Flex’ IR Extender**

Connect the ‘Flex’ IR extender for the remote control to the IR extender port on the front panel of the system. Position the ‘Flex’ IR extender near the front of the monitor or wherever it will receive a clear signal.

**Connecting the USB Mouse**

Connect a USB mouse to one of the USB ports on the front of the system.

**Connecting a Monitor (not included)**

Connect an HDMI cable (not included) from your TV or monitor to the HDMI port on the rear panel of the system.

**Connecting a Touch Monitor (not included)**

Connect a touch monitor (not included) from the monitor to the VGA port on the rear panel of the system.

**Powering ON the DVR**

Connect the power cord to the DC 12V port on the rear panel and the power cord into an electrical outlet. At startup, the system performs a basic system check and will not display a live display until all components are connected. After a few moments, it will load a live display view.

**Setting the Date & Time**

1. Click the date on the Main Menu.
2. Click to open the Setup menu.
3. Click Date/Time/Time Zone Tab.
4. Conflicting the Settings:
   - Date: Select to view the date format you would like to use (Y/M/D, D/M/Y, M/Y/D).
   - Time: Select 24 hour or 12-hour view.
   - Time Zone: Select your local time zone.

1. Under DDNS, select the model of your router to automatically populate a list of compatible devices.

2. Your router’s user name and password are required. Please go to Step 4-Optional (Manual Port Forward).

3. Update the Router Settings:
   - Click the Update Router button. The program will begin updating the router settings. This may take 20-30 seconds.
   - Close the update window when the update finishes.

4. Test your Connection:
   - Click the Test Connection button. Your system’s default browser opens and connects to your Lorex devices.

5. Fill out the My DDNS form:
   - Product Warranty: Select the product warranty you obtained in the previous steps.
   - Device Name: Enter a name for your device. You can enter your name, business name, or anything of your choice.
   - MAC Address: Enter the MAC address of your Lorex system recorded in Step 3-1.
   - URL Request: Enter the web site address that will be used to connect to your Lorex system.

6. Create an Account:
   - Step 1: Create a new account.
   - Step 2: Complete New Account Information.

7. Fill in the warranty registration form with your product and purchase details:
   - Click Save Warranty: Click the sticker underneath your DVR for the Product Model Name and Serial Number.

8. Complete New Account Information:
   - Warranty Registration is required for DDNS.
   - Step 1: Click Warranties.
   - Step 2: Click Activate Warranty.
   - Step 3: Under Your Address, select an address or click to enter a new address. Fill in your address information and click Create Address.

9. Fill in the DDNS registration form with your product and purchase details:
   - Click Save DDNS: Click the sticker underneath your DVR for the Product Model Name and Serial Number.

10. To enable DDNS on your DVR:
    - Click the Update Lorex Edge Client 12 Software for Remote Viewing.

11. Install Edge Client Software (ON YOUR REMOTE COMPUTER):
    - To enable DDNS on your DVR, you will need to enter it into your system to enable remote access.

12. Congratulations! You have completed Step 4 successfully. You can now access your DVR via the internet, view alerts, and control your cameras remotely.
