A. Installing the Camera

1. Mount camera stand to the wall.

2. Screw the antenna to the back of the camera.

3. Adjust the camera stand's angle and tighten the thumbscrew to secure the camera position.

4. Connect the power adapter to a local 120V AC power outlet.

NOTE: Before installing, plan where and how it will be positioned and where the cable will connect to the power adapter. Before starting permanent installation, verify performance by observing the image on a monitor when the camera is positioned where it will be permanently installed.

NOTE: Avoid installing in a location which requires the wireless signal to pass through cement, concrete, and metal structures. This will reduce the transmission range.

B. Installing the Receiver

1. Attach the included antenna to the receiver by screwing it on.

2. Take the double-sided tape supplied to securely attach the receiver to a flat surface.

3. View your Camera on any Observation Monitor/DVR with BNC inputs or TV with RCA inputs.

   **1. Observation monitor or DVR with BNC:**
   - Attach the included RCA/BNC adapter to RCA cable and plug into observation monitor or DVR.
   - Connect the audio end of the RCA cable to the audio input of the observation monitor or DVR.

   **2. TV with RCA Inputs:**
   - Connect the RCA video and audio ends of the RCA video/audio cable to the video and audio inputs on your TV.

4. Connect the power adapter to the receiver and the other end to an electrical outlet.

ATTENTION: Make sure to first connect and power on the receiver before powering on the camera; this will ensure a proper connection.

Getting Started

This wireless digital security camera system comes with the following components:
- Digital wireless color camera with sunshade
- Camera stand
- Wireless receiver
- Antenna’s for camera and receiver
- Power adaptors for camera and receiver
- RCA/BNC adapter
- Mounting hardware
- Double sided tape for receiver
- Instruction manual

Multi Digital Wireless Camera Installation

When installing multiple digital wireless security cameras in the same environment maintain as much space as possible between the receivers to optimize camera performance.

**NOTE:** It is not recommended to install more than 4 digital wireless security cameras in the same environment to maintain optimal video frame rate performance.

Need to extend the wireless range? See product manual for further details.
